Task 0. Simple web stack

- What is a server

A server is hardware or software capable of providing content on request and on which a client can be connected through a communication channel or protocol

◆ ◆ ◆

- What is the role of the domain name

A domain name acts as a human discernible text by which can act as label for a specific website

◆ ◆ ◆

- What type of DNS record `www` is in `www.foobar.com`

`www` is considered a subdomain of the domain name `foobar.com` hence it is found in the CNAME (canonical name) in the DNS entries of the domain

◆ ◆ ◆

- What is the role of the web server

To provide access to resources on the internet

◆ ◆ ◆

- What is the role of the application server

To provide an interface to work and implement the business logic

◆ ◆ ◆

- What is the role of the database

To provide a medium for storage, retrieval of data

◆ ◆ ◆

- What is the server using to communicate with the computer of the user requesting the website

`HTTP` to receive and parse `requests` by the user and to give back feedback in form of `responses` based on the requests

◆ ◆ ◆
